Restoration of the Section Corner of Sections 29, 30, 31, & 32
T 2 S, R 10 W, W.M.

The original BT's are all partly rotted stubs but the scribing is
plainly visible on all except the ST Hemlock to the Northwest,
which only shows the face which was cut into it. I set a 1 1/4" x 2 1/2"
galvanized pipe with a lead plug, 2" out of the ground. The corner
was not rewatched at the present time.
The top of the lead plug is marked as follows:

From which bears:
Original BT: 13" Hemlock, N 22 E, 19.1'
Original BT: 20" Hemlock, N 11 W, 19.0'
Original BT: 22" Hemlock, S 66 W, 23.1' (slope)
Original BT: 20" Hemlock, S 27 E, 17.3'

Restoration of the 1/4 corner of Sections 29 & 32, T 2 S, R 10 W, W.M.

To retrace the original survey (1882) I ran a compass line East,
Var. 22 E, out of the Section Corner of 29, 30, 31 & 32, by using
backsights because of local attraction, 2623 feet. From a point
5 feet North of station 26+23 I found the following evidence of
the original corner:

An original BT, 20" Hemlock, now a 36" Hemlock stub with a
rotted face containing axe marks but with no scribing visible,
bears S 60 E, 20 links.

An old rotted stump on an uprooted mass of dirt which would
fit well for the bearing and distance to the other original BT,
A Hemlock 18", N 8 E, 29 links.
A 36" Hemlock snag with old cruiser marks (X Y ) and blazes,
S 74 1/2 W, 7.5 feet.
A 36" Hemlock with old cruiser marks (X Y ) and blazes,
N 74 1/2 W, 13.5 feet.

I also ran a compass line West out of the Section Corner of 28, 29,
32 & 33, by using backsights because of local attraction, 2728
feet, from which point I had to offset South 110 feet to the
corner described above.

After a thorough search of the vicinity, I set a 1 1/4" x 2 1/2"
galvanized pipe with a lead plug, exactly 13.2 feet N 60 W of
the remaining original BT. The corner was then rewatched as
follows:
A Hemlock, 6", bearing S 50 1/2 E, 8.8 feet with a Yellow Tag
and marked "BT 1/4 S 32 #3756"
A Hemlock, 6", bearing N 27 1/2 E, 15.9 feet with a Yellow Tag
and marked "BT 1/4 S 29 #3766"

The top of the lead plug is marked as follows:
