Establishment of the N 1/16 corner of Sections 13 and 14, T2S R10W W.N.

Chaining South out of the Section Corner of 14/13 along a brushed line, at slope station 14 plus 35, I found a 36" Spruce stub (rotten). Chopped into the stub and found two blazed faces on the East side with scribing plainly visible on both "BT" and "CS". The tree had been scribed prior to its death and this was the first time that the faces had been uncovered as they were completely grown over. After a thorough search of records at the Court House, it was decided that the corner had never been recorded.

Using balanced transit traverse notes between the Section corner and the 1/4 corner, both of which are in good condition, I set a 1" x 2 1/2" galvanized iron pipe with a lead plug 6" out of the ground exactly half way between the two corners. From which bears: Var. 22 E.

Old BT Stub S 58 1/2 W 20.1 feet
New BT 13" Hemlock N 55 1/2 E 9.8 feet with a Yellow Tag. Marked "BT N 1/6 S 1/3 #376"

Bearing and distance from the Section corner is S 0° 40' W 1419.00 feet
Bearing and distance from the 1/4 corner is N 0° 40' E 1419.00 feet

The top of the lead plug is marked as shown below:
